# PSLV-C34

PSLV-C34 at the Second Launch Pad

India's Polar Satellite Launch Vehicle, in its thirty sixth flight (PSLV-C34), will launch the 727.5 kg Cartosat-2 series satellite for earth observation and 19 co-passenger satellites together weighing about 560 kg at lift-off into a 505 km polar Sun Synchronous Orbit (SSO). PSLV-C34 will be launched from the Second Launch Pad (SLP) of Satish Dhawan Space Centre (SDSC) SHAR, Sriharikota. It will be the fourteenth flight of PSLV in 'XL' configuration (with the use of solid strap-on motors).

The co-passenger satellites are from USA, Canada, Germany and Indonesia as well as two satellites from Indian University/Academic Institute. The total weight of all the 20 satellites carried onboard PSLV-C34 is about 1288 kg.

## PSLV-C34 at a glance (Vehicle lift-off Mass: 320 tonne Height: 44.4 m)

HTPB: Hydroxyl Terminated Poly Butadiene

UH25 : Unsymmetrical Dimethyl Hydrazine + 25% Hydrazine Hydrate

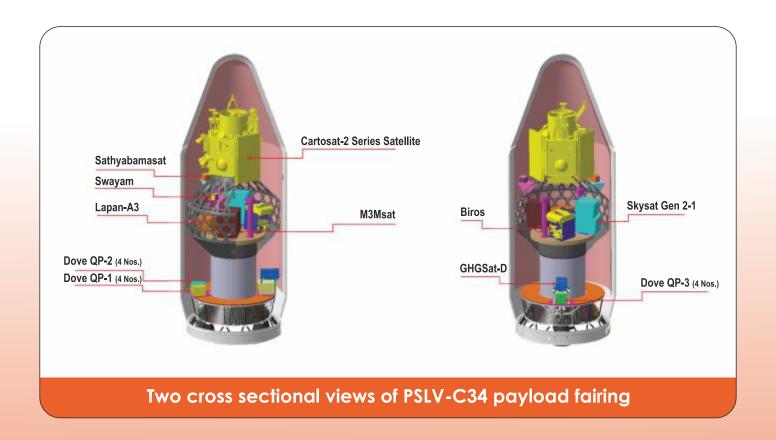

N<sub>2</sub>O<sub>4</sub>: Nitrogen Tetroxide

MMH: Mono Methyl Hydrazine, MON-3: Mixed Oxides of Nitrogen

# PSLV-C34

# **PSLV-C34** Typical Flight Profile

# **Primary Satellite**

The Cartosat-2 series satellite is the primary satellite carried by PSLV-C34. This satellite is similar to the earlier Cartosat-2, 2A and 2B. After its injection into a 505 km polar Sun Synchronous Orbit by PSLV-C34, the satellite will be brought to operational configuration following which it will begin providing regular remote sensing services using its Panchromatic and Multispectral cameras.

The imagery sent by the satellite will be useful for cartographic applications, urban and rural applications, coastal land use and regulation, utility management like road network monitoring, water distribution, creation of land use maps, precision study, change detection to bring out geographical and manmade features and various other Land Information System (LIS) and

Geographical Information System (GIS) applications.

# Salient features

| Satellite mass                 | 727.5 Kg   |  |  |
|--------------------------------|--|--|--|
| Orbit type                     | Circular polar Sun Synchronous                             |  |  |
| Orbit height                   | 505 km   |  |  |
| Orbit inclination              | 97.48 degree   |  |  |
| Local time of Equator crossing | 9:30 am  |  |  |
| Power                          | Solar arrays generating 986 Watts; Two Li- Ion batteries   |  |  |
| Attitude control               | Reaction wheels, Magnetic torquers and Hydrazine thrusters |  |  |
| Design life                    | 5 years  |  |  |

# Co-passenger Satellites

### International Customer Satellites

### LAPAN-A3 [Indonesia]

LAPAN-A3 is an Indonesian microsatellite for Earth observation (multi-spectral remote sensing) for land use, natural resource and environment monitoring.

Mass: 120 kg

### Mass: 85 kg

### M3MSat [Canada]

M3MSat (Maritime Monitoring and Messaging Micro-satellite) is a technology demonstration mission jointly funded and managed by Defense Research and Development Canada (DRDC) and the Canadian Space Agency (CSA).

The satellite's primary mission is the collection and study of Automatic Identification System (AIS) signals from low-Earth orbit.

### **BIROS** [Germany]

BIROS (Berlin Infrared Optical System) is a small scientific satellite from the German Aerospace Center (DLR). The main mission objective is the remote sensing of high temperature events.

### SkySat Gen2-1 [USA]

SkySat Gen2-1 ("SkySat-3") is a small Earth imaging satellite designed and built by Terra Bella, a Google company based in Mountain View, California,

The satellite will be capable of capturing sub-meter resolution imagery and HD video.

Mass: 110 kg

### GHGSat-D [Canada]

GHGSat-D is an Earth observation Satellite built by Space Flight Laboratory at the University of Toronto Institute for Aerospace Studies.

GHGSat-D is meant for measuring atmospheric concentration of greenhouse gases (Carbon Dioxide and Methane).

Mass: 25.5 kg

### Dove Satellites [USA]

The Planet Labs Dove Satellites (Flock-2P) are Earth imaging satellites. A total of twelve Dove satellites are carried in this mission inside three QuadPack dispensers.

Mass: 4.7 kg each

### University/Academic Institute Satellites from India

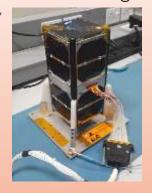

### SATHYABAMASAT

{from Sathyabama University, Chennai}

### Mission objectives:

To collect data on green house gases (Water vapor, Carbon monoxide, Carbon dioxide, Methane and Hydrogen fluoride).

### **SWAYAM**

{from College Of Engineering, Pune}

### Mission objectives:

To provide point to point messaging services to the HAM Community.

Mass: 1 kg
